

ROUND CORNER COMPRESSION SYSTEM

The Unique HTS Round Corner Compression System is used in HMCX rectangular frames to compress and seal the installation of cables/ pipes and HF modules. It is composed by:

- Endpacker: The final element of the frame installation, this is inserted above the compression plate. The tightening of the bolts and the steel insert pins provides pressure to the system and ensures correct sealing.
- Compression plate: Placed on top of the last row of blocks, this plate distributes the pressure from the endpacker to ensure the correct compression is applied to the system.

CHARACTERISTICS

- Available in the following variants; RR (Right round corner), LR (Left round corner) and DR (Double rounded), for the different kinds of apertures within a HMCX frame.
- Designed to be installed within HMCX apertures.
- Materials: Mild Steel, Stainless Steel.
- Ex available under request.
