

◆ → **COMPRESSION TOOL**

This re-usable compression tool is designed to apply compression to the system before placing the endpacker within the frame.

This makes the operation of installing the compression system much easier than a conventional bolt-type system.

- ◆ Available in two versions for different frame internal width; 60mm (Ref. 982) and 120mm (Ref. 981).

◆ → **PULLER**

The Puller Tool (Ref. 980) is used to facilitate the modification or dismantling of an installation.

This re-usable tool is designed to extract the compression system without damaging the frame and reducing dismantling time up to 50%. This also means that you can re-use the Hawke compression system.

◆ → **CLAMP TOOL**

The Clamp Tool (Ref. 969) is used to aid onsite installation.

This re-usable tool is designed to hold the blocks or cables in position during an installation, especially useful in horizontal frames, partial installations or when the amount of cables makes the installation uneasy.
